

turbulence_models.Boundary
Conditions

```
classDiagram
    class turbulence_models_BoundaryConditions["turbulence_models.BoundaryConditions"]
    class turbulence_models_InletBoundaryConditions["turbulence_models.InletBoundaryConditions"]
    turbulence_models_InletBoundaryConditions --|> turbulence_models_BoundaryConditions
```

The diagram illustrates a class hierarchy. The base class, `turbulence_models.BoundaryConditions`, is shown in a white box with three empty slots for attributes or methods. The derived class, `turbulence_models.InletBoundaryConditions`, is shown in a grey box with a list of attributes: `+ BoundaryConditionType type`, `+ float u`, `+ float v`, `+ float k`, and `+ float omega`. A blue arrow points from the derived class to the base class, indicating inheritance.

turbulence_models.InletBoundary
Conditions

- + BoundaryConditionType type
- + float u
- + float v
- + float k
- + float omega
